

# New features and improvements available with **TeamViewer 14**

## Custom Device Information

Add the information you need for your daily work to the devices in your Computers & Contacts list. Display details such as operating system, manufacturer, department, or any option you specify. Centrally configure the important fields for your company in the Management Console so your colleagues can enter the relevant information in the Computer & Contacts list.

## Advanced Device Grouping

Quickly and easily group your devices according to the properties that are most relevant to you. You can use the custom device information for optimal management and arrange the devices in your Computer & Contacts list according to your current needs.

## One-Click Remote Script Execution

Say goodbye to repetition. Use scripts to automate routine processes and save time on common tasks. Execute standardized processes with just one click using pre-written scripts. Simply write the code, upload your work in the Management Console, and access your saved scripts easily and conveniently during each session.

## Dark Mode and best performance in macOS Mojave

Discover TeamViewer's all-new look. Our latest Dark Mode feature is now available for Windows, Linux and Mac. Stop straining your eyes and use this feature when you're in dimly lit surroundings. Switch between the light and dark interface as needed on Windows and Linux or, depending on your system settings, on MacOS Mojave. TeamViewer is now optimized for macOS 10.14 Mojave. With improved image quality and smart resource allocation, TeamViewer enables users to unveil Mac's full power for high-performance remote control sessions.

## Trusted Devices Management

Keep track of the devices and IP addresses that you have trusted. Administrators can also view all of the company's trusted devices and easily remove them in an emergency for maximum security.
